

BASIC ENGINEERING

At this stage the design gets tested according to the preconditions of the client. The working process, functionality, performance & safety features of the machine are recorded in a functional design.

Before designing JosCro Engineering takes your production capabilities and that of your suppliers into consideration. Next to that your montage and transport capabilities are also taken into consideration. This way the designed machines can quickly be put in to fulfil their main purpose and you don't end up with unanticipated costs.

- << From concept to basic design;
- << Testing according to set of requirements, wishes and demanded;
- << Functional design:
Working process, functionality, performance & safety features;
- << Stress calculations, FEM-analyses and Simulations;
- << Writing reports;
- << Coordination / design / adaption of hydraulic and electronic plans;
- << Feasibility studies.
