

PROJECT ENGINEERING

The interim Project Engineering of JosCro Engineering can take a load of your shoulders by temporarily letting us support your company with a selection of the following responsibilities:

- Formulate the projects objectives;
- Work out mechanical and functional specifications with all concerned parties;
- Set up project planning in consultation with your suppliers and manufacturers;
- Organize kick-off meetings with all concerned parties to discuss the project's specifications, the run time and budgets;
- Being the point of contact in communication for your customer, your internal organisation and external partners concerning the appointed project;
- Maintain contacts with your clients during the span of the project;
- Organize progress discussions;
- Guide and control third party suppliers;
- Watch over the project budget as fixed by your sales department;
- Putting together of project documentation for your technical dossiers;
- Quality control and guidance of internal and external project engineering;
- Signalling contract extra's and guiding the settlement of it.
